Index

- 1. Shopify App Features**
- 2. Integration Requirements / Overview**
- 3. Initial Configuration**
- 4. Importing Products to Shopify from Teamatical**
- 5. Managing / Viewing Products**

Product Importing

- Any product enabled on the Teamatical platform can be imported to Shopify. Customers can then view, order and customize products directly on your website.

3D Product Viewer

- Display your products on Shopify dynamically in 3D with real time rendering. Invert and measuring buttons available.

Custom Personalization Fields

- Four personalization fields with customizable labels.

Order API

- Once the customer has purchased the product on Shopify, our app will automatically read the order details and send them to Teamatical's backend for production.

Fulfillment API

- An optional feature - automatic fulfillments will update the order fulfillment details on Shopify once the order has been sent out by Teamatical.

Online Builder **(Coming Soon!)**

- Ability to upload your own templates and modify custom designs for your users to build their own products.

Requirements

- Organization setup on Teamatical
 - Teamatical login to admin page
 - First/last name, email, phone number, address
 - Shipping hub
 - Sales and business license
- Creation of a store on Teamatical with your own “Product Configurations”
- The myshopify.com URL (Ex. teamaticaldevstore.myshopify.com)
- The name of the **theme** your Shopify website runs on (Ex. Dawn)
- Granting collaborator access from our developer account to your Shopify store for theme configuration
- Download the Teamatical App and follow the steps on the following pages

Additional Info

The Shopify implementation and theme configuration process takes roughly 1 - 3 days.

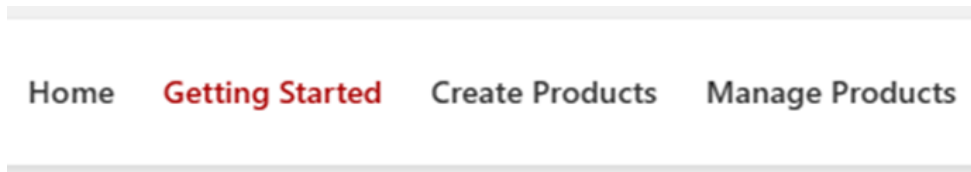

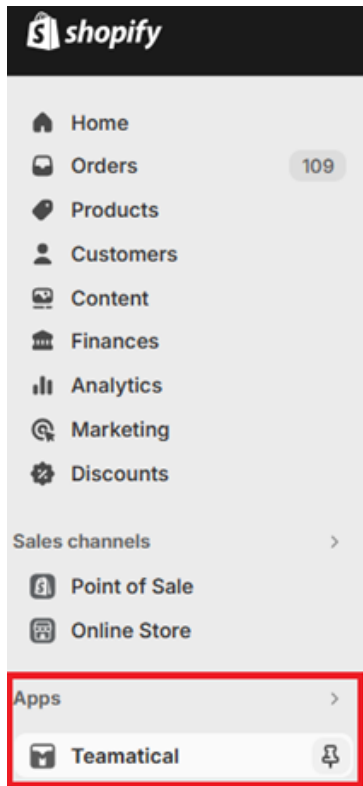

Collaboration access by our Shopify dev account is required to test the app and view details about your custom themes.

Organization setup, store setup, MyShopify URL, and theme name are the prerequisites before moving forward.

Initial Configuration

Step 1: Download the Teamatical Shopify App here: [Teamatical Shopify App Download](#)

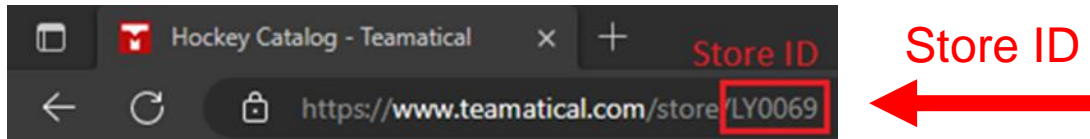

Step 2: Once installed, open the Teamatical app within Shopify and selected “Getting Started”.

Step 3: The ‘Getting Started” page will walk you through the steps for initial configuration.

Importing Products from Shopify to Teamatical

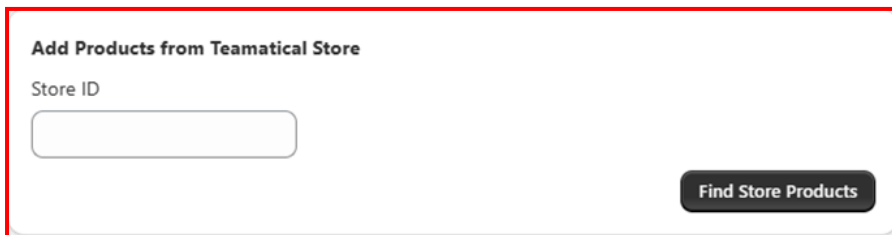

Step 1: Find and copy your Teamatical Store ID (located at the end of your Teamatical website URL).

Step 2: Navigate to the “Create Products” page within the Teamatical app.

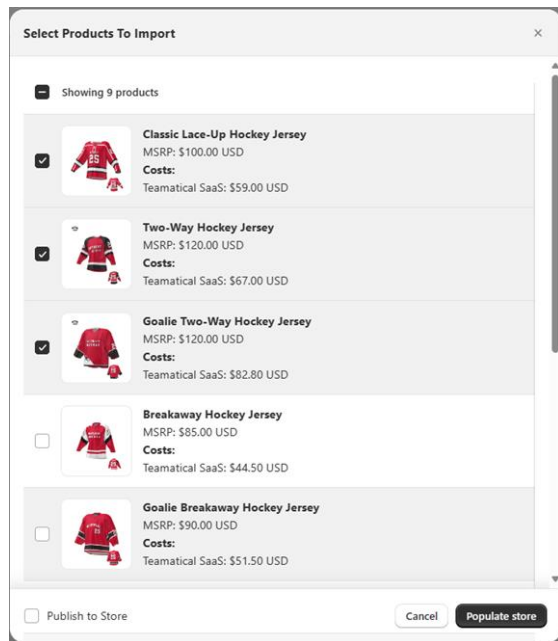

Step 3: Enter the Store ID and click “Find Store Products”.

Step 4. Select the products from your Teamatical store that you’d like to add to your Shopify store.

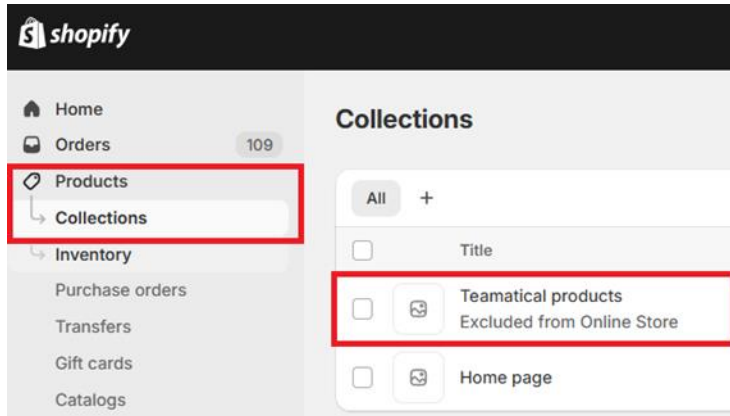

Step 5: When ready, select “Publish to Store” to make the selected products available for viewing and purchasing on your Shopify store.

Managing / Viewing Products

There are two ways to view the products you have imported from your Teamatical store:

1. Within Shopify, under the Products > Collections tab, select “Teamatical products”

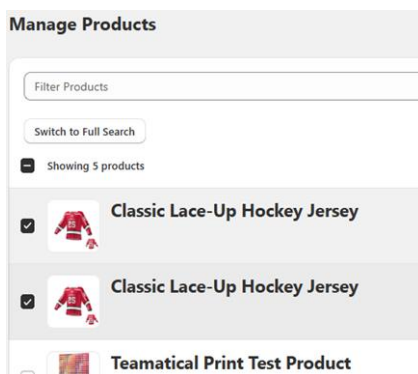

2. Within the Teamatical Shopify App, select “Manage Products”

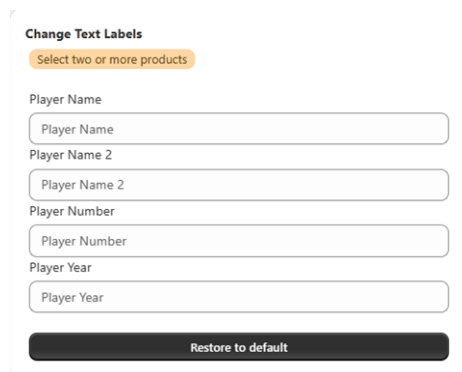

Home Getting Started Create Products **Manage Products**

Within the “Manage Products” page, you can:

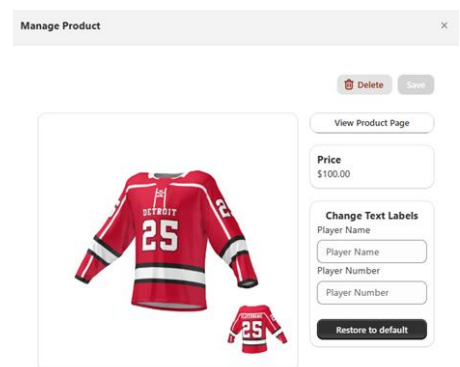

Search for, filter, and add/delete products from your Shopify front end

Edit text input labels

Change product prices

Order Placement

Note: You do not need to do anything regarding order placement. Once a customer purchases a product that has been set up in the Teamatical system, the order will automatically be sent to our back-end end, and the production process will begin.

You will be able to view these orders and their progress from your admin page on Teamatical.com.
